

# SOFTWARE DEVELOPER

**“To do great work, you must love what you do - Steve jobs.”**

Its always a pleasure to write some code, but my six years experience in software gave me different point of view, its not only writing code I enjoy the most, its creating solutions to problems and empowering businesses.

One of the software's I created was a Property Management system, My key responsibilities here to analyze their business requirements, and develop the features needed for their operations and considering an intuitive design.

My evaluated experiences Have gained me knowledge and skills in Business Analysis, Research and development, Project Management and also some areas in Operations.

I also have expertise in UX/UI and Software architecture design, Mobile application development, API'S and Creating libraries etc, Having these sets of skills enables me to create and design long-lasting, efficient solutions for my clients.

*If you're a company that seeks to be better everyday and have passion in transforming businesses, let me contribute something to what you care about, looking forward to creating remarkable things with you.*

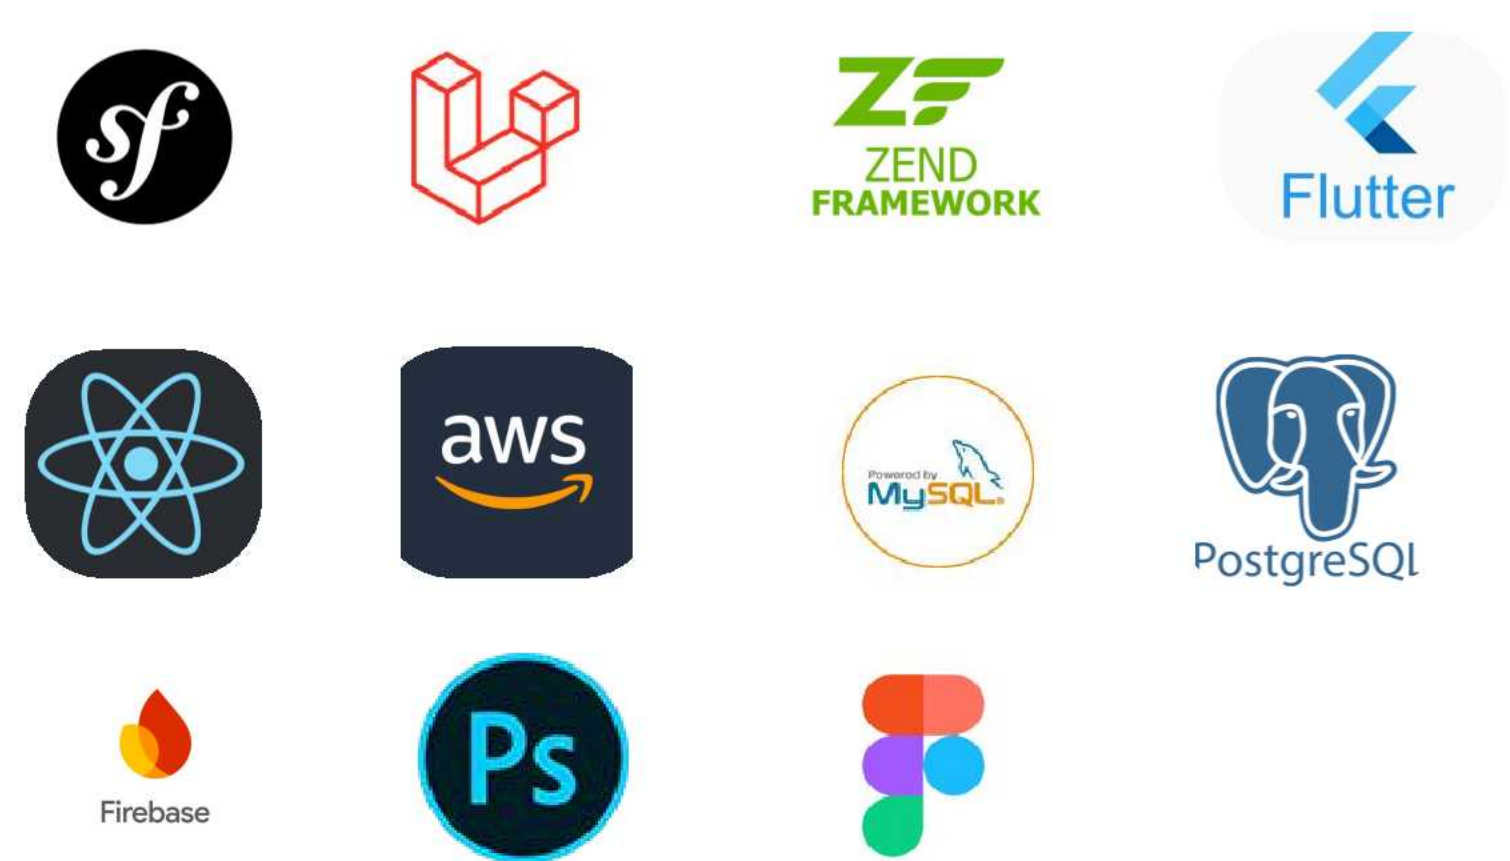

# MARK GONZALES

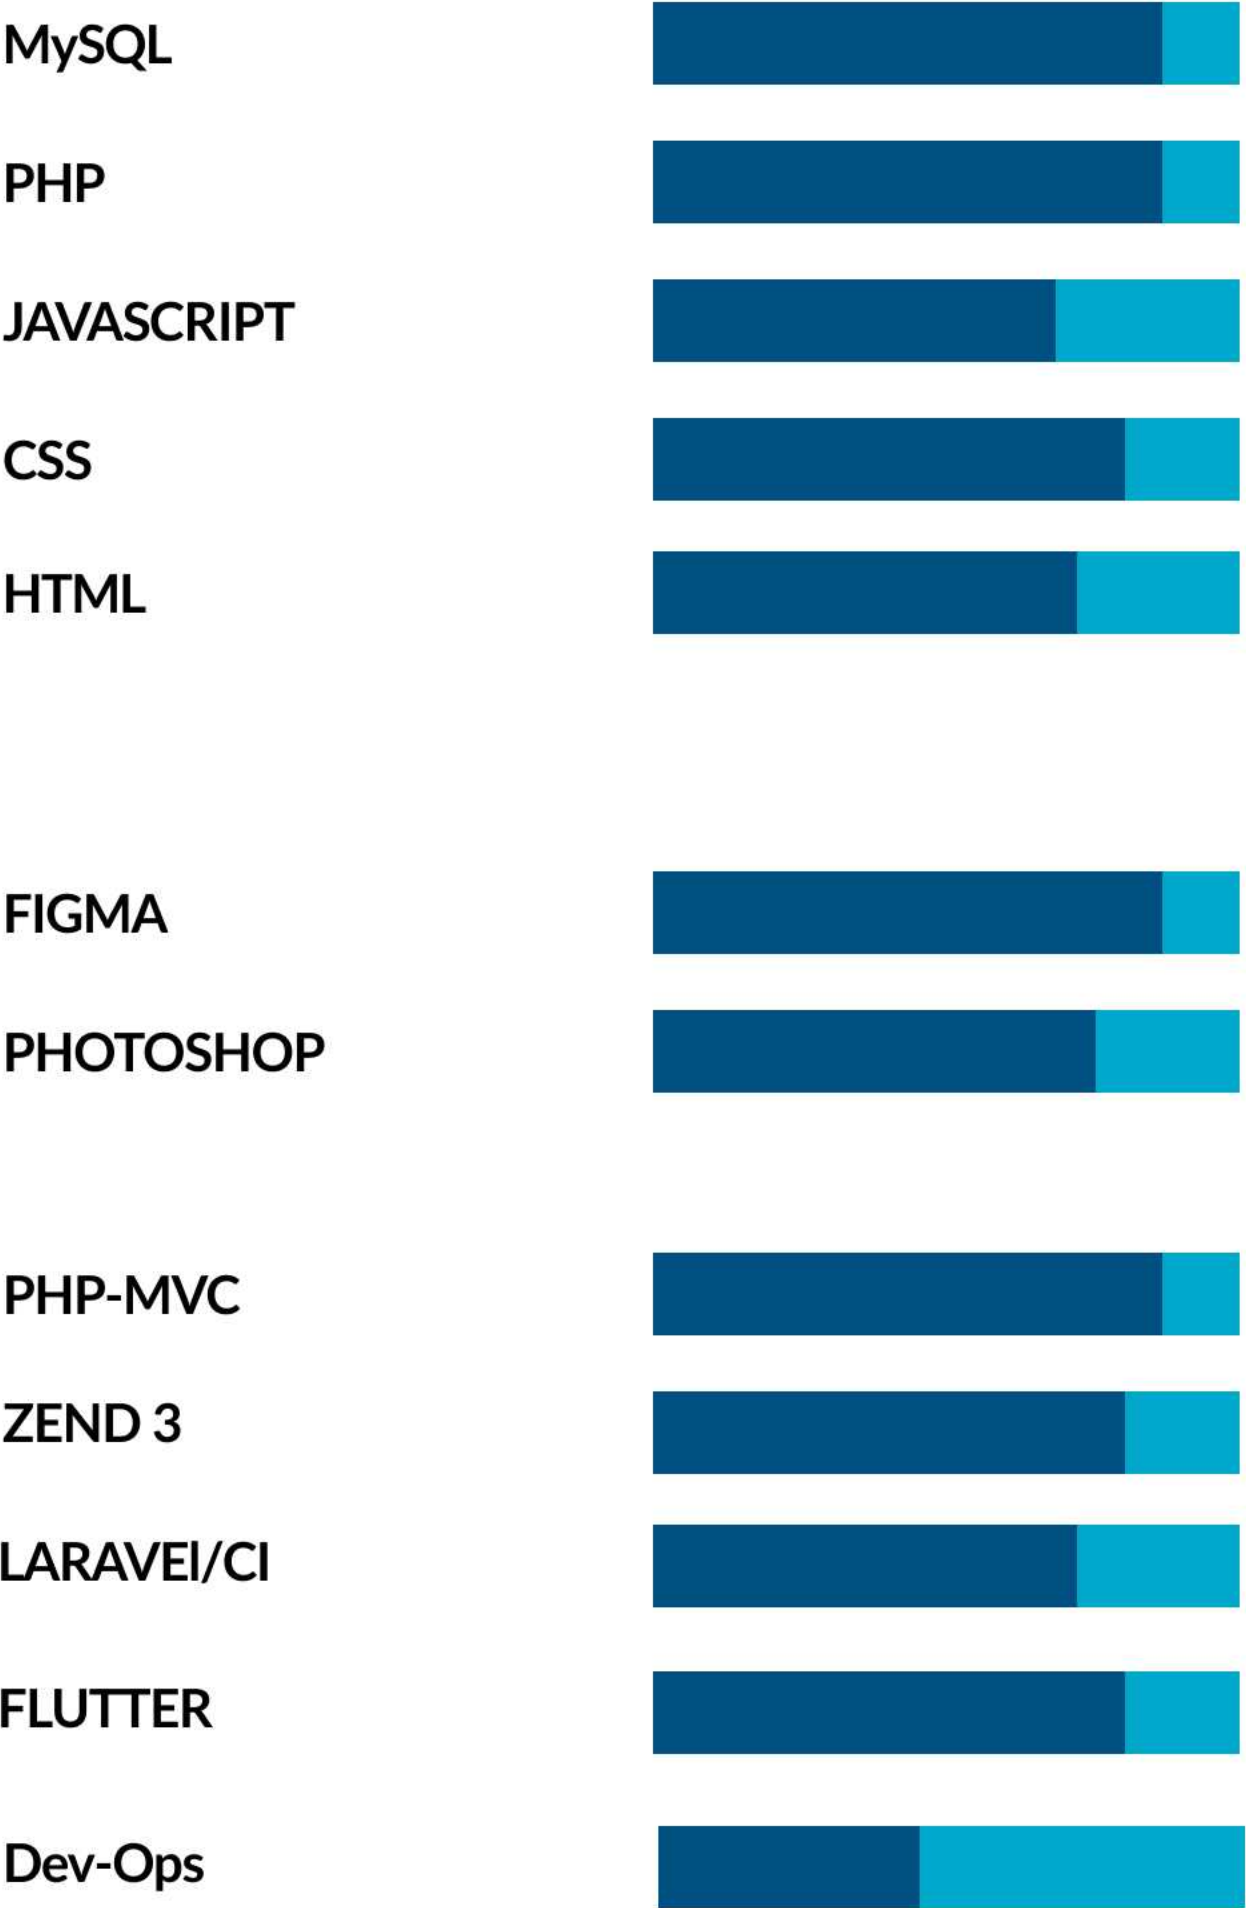

## SOFTWARE DEVELOPER

let me contribute something valuable to what you care about

Can Start ASAP

### SKILLS

### EXPERIENCES

- Transportation Service-  
(Software Developer)

Most - Recent

  - Google Map Services for flutter
  - Design Application from scratch
    - Creating User Flow
    - Designing UX/UI
    - Creating wireframes
    - Designing Api endpoints parameters and payload
- Japan Livline  
(Software Developer)

2024 - 2025

  - Create Design, Review Design
  - Create Revisions on existing web applications
  - Create API's for hotel cleaning mobile application, create some modifications on the mobile which I enjoyed so much.
- SPI Global (now Straive)  
(Senior Software Engineer)

2021 - 2023

  - I was task to create a system design for the complex feature they'll be adding on the system.
  - Lead the crash management software team
  - Understanding Purpose and Feature requirements gathering from operations
  - Discussing Design and Issues and Proposing Solutions
  - Assisting Different departments
  - Creating Customize Reports
  - Code Analysis, Development and Deployment
- Manufacturing Company  
(Corporation)

2019 - 2024

(Solutions Provider and Developer)

  - I was task to conceptualize a solutions for their services
  - Collect solution requirements and operations analysis
  - Design user flow, create wire frames and demo prototypes
  - Design Databases
  - Improve and optimize current frameworks
  - Manage Projects from implementation to maintenance
  - Mentor new employees
  - Git for version control
- SSB GROUP of Companies  
(Software Solution Architect/  
Software Provider)

2019 - 2024

  - Manage Projects from implementation to maintenance
  - Creating Proposals for system upgrades ( better flows, optimizations, resources and files management)
  - Software integration with Payment solution provider PayPal and Dragon Pay
  - On boarding contractual developers
  - Checks and validates code deployed by other developers

# SUMMARIZED EXPERIENCES

## CRASH MANAGEMENT SOFTWARE

This software caters vehicular incidents is US (52 states) its one of the companies flagship and one of the biggest projects, The project ensures all incidents are being taken care of and ensures that inform ation's about the incidents are all correct. Our primary users for this software are the operations team, they use this software to review data entries.

SPI - GLOBAL now STRAIVE

Regular Employment Project

### KEY ROLES

- 1. Customize Report Generations (Database Queries)
- 2. Codebase Maintenance
- 3. Git Version Control
- 4. Develop new tools
- 5. Develop report modules
- 6. Assistance to different departments(ML, DB, BA)

### PROJECT INTEGRATION AND KEY FEATURES

- 1. Data Extraction from pdf or other sources - OCR technology by AWS
- 2. Enhancing Extracted Data From Aws - In house AI tech for data extraction
- 3. Data Transformation - Raw data to Structured Data Type
- 4. Data Mapping

## PROPERTY MANAGEMENT SOFTWARE

Property Management company that deals with leasing, selling and managing condo units in the Philippines, this software records major transactions of the company from day to day task not limited to the following, account management for owners, tenants and employee, customer billing, invoices, payments and property overview.

SSB Group of Companies

Contractual Project

From Scratch

### KEY ROLES :

- 1. Requirement analysis
- 2. Conceptualized flow and Wire framing
- 3. Features and Risk Identification
- 4. Develop new tools
- 5. Develop report modules
- 6. Maintain Code
- 7. Git Version Control
- 8. Server Management

### PROJECT INTEGRATION AND KEY FEATURES

- 1. Sending Emails
- 2. Payment Gateways
  - a. OMNIPAY (PayPal) deprecated
  - b. Dragon Pay
- 3. Customer Billing
- 4. Task Scheduling and Tracking
- 5. Images and resources management

## Customized HRIS with Mobile application - MKEHedinway Corporation

Created a timekeeping, attendance software for MKE, provided tailored fit payroll processing a customized bonuses and deduction management, Clock in and out Geolocation tagging and removed the hassle of biometric maintenance by providing quick clock in and out qr.

### KEY ROLES :

- 1. Developer - Review and Design Implementation.
- 2. QA - Creating checklist for clarifications and items for fixes.
- 3. Backend - Fixing / Implementing backend processes

### PROJECT INTEGRATION AND KEY FEATURES

- 1. Geolocation tagging
- 2. Payroll Batching
- 3. Online Payslip
- 4. Attendance Quick Fix
- 5. Planned and Instant Shifting Schedule

## Transportation Mobile application

Developed a ride-hailing software application that can be used by different TNVS companies. It uses Google Maps and the device's GPS for location tracking and navigation, while keeping API usage low to help reduce costs. The system also has a flexible fare system that considers different vehicle types, surge rates, distance, and other factors to provide fair pricing. It also includes a QR code scanner that allows drivers and passengers to easily accept bookings face-to-face.

### KEY ROLES :

- 1. Developer - Review and Design Implementation.
- 2. QA - Creating checklist for clarifications and items for fixes.
- 3. Backend - Fixing / Implementing backend processes

### PROJECT INTEGRATION AND KEY FEATURES

- 1. Geolocation
- 2. Google Map Services
- 3. QR Codes
- 4. API
- 5. Security
